

Zozimo Fernández

Senior Software Engineer

zozifer96@gmail.com | github.com/Zozi96 | linkedin.com/in/zozifer96 | portfolio.zozifer96.com | Villahermosa, MX

SUMMARY

Senior Software Engineer focused on distributed systems, Python, .NET, data engineering, and cloud architecture. I ship production-grade systems with strong fundamentals and clean boundaries.

CORE SKILLS

Languages: Python, C#, TypeScript, JavaScript, SQL

Frameworks: Django, FastAPI, Litestar, Flask, ASP.NET Core, Blazor

Databases: PostgreSQL, MySQL, SQL Server, MongoDB, PostGIS

Cloud & DevOps: AWS (Glue, EC2, RDS), Docker, Git, Windows Server

EXPERIENCE

Senior Software Engineer — ArkusNexus

March 2023 – Present

- Leading architecture and development of distributed services for Advanta Health with a strong focus on resilience and maintainability.
- Modernized legacy infrastructure for Wag Hotels, helping move the platform toward a more scalable cloud setup.
- Improved backend performance by refactoring expensive queries and tightening execution paths across core flows.
- Designed large-scale ingestion pipelines for Bob Finance with AWS Glue and PySpark across heterogeneous data sources.

Python Developer — Adinfi

April 2022 - March 2023

- Built the core backend for ADContent using Django REST Framework with strong API discipline and maintainable service structure.
- Designed a dedicated database architecture for invoice processing, separating concerns to preserve long-term scalability.
- Improved system responsiveness through indexing strategy and query tuning on high-traffic environments.
- Pushed Docker adoption to standardize local environments and deployment flows.

Python Engineer (Tech Lead) — mediQó

December 2021 - May 2023

- Led technical direction for a HealthTech product, balancing roadmap delivery with platform quality.
- Implemented geospatial capabilities with PostGIS for provider matching and location-aware experiences.
- Ran reviews and performance profiling to remove bottlenecks before they became product pain.
- Architected scalable REST APIs for growth and integrations.

Python Developer — XID - Digital Services

June 2021 - December 2021

- Worked on booking engine services for Palace Resorts using Flask and high-availability backend patterns.
- Refactored legacy code to improve maintainability and reduce operational friction.
- Collaborated on complex reservation APIs with cross-functional teams.
- Strengthened platform stability with better integration testing and safer error handling.

Software Developer — Binary Systems

August 2020 - July 2021

- Built a custom CRM for real-estate workflows using Django and PostgreSQL.
- Resolved production issues and delivered iterative features tied directly to operator workflows.
- Optimized ORM queries across more complex relational data paths.
- Delivered software under agile cycles without sacrificing engineering fundamentals.

EDUCATION

B.Eng. in Computer Systems Engineering — Instituto Tecnológico de Villahermosa

OPEN SOURCE

hash-forge — A lightweight Python hashing toolkit with more than ten secure algorithms, async support, builder patterns, batch operations, and clean configuration ergonomics.
